Basic

1.1 Codeblock setting

```
1 | Settings -> Editor -> Keyboard shortcuts ->
      Plugins -> Source code formatter (AStyle
3 | Settings -> Source Formatter -> Padding
4 Delete empty lines within a function or
 Insert space padding around operators
6 Insert space padding around parentheses on
 Remove extra space padding around
      parentheses
```

1.2 data range

```
1 int (-2147483648 to 2147483647)
2 unsigned int(0 to 4294967295)
3 long(-2147483648 to 2147483647)
4 unsigned long(0 to 4294967295)
5 long long(-9223372036854775808 to
      9223372036854775807)
6 unsigned long long (0 to
      18446744073709551615)
```

1.3 IO fast

```
1 void io()
      ios::sync with stdio(false);
      cin.tie(nullptr);
      cout.tie(nullptr);
```

1.4 常忘記

```
1 round(double f); // 四捨五入
2 ceil(double f); // 無條件捨去
3 floor(double f); //無條件進入
5 /*aueue*/
6 | queue < datatype > q;
7| front(); /*取出最前面的值(沒有移除掉喔!!)*/
s| back(); /*取出最後面的值(沒有移除掉!!)*/
9 pop(); /*移掉最前面的值*/
10 | push(); /*新增值到最後面*/
11 empty(); /*回傳bool,檢查是不是空的queue*/
12 | size(); /*queue 的大小*/
14 /*stack*/
15 stack<datatype> s;
```

```
16 | top(); /*取出最上面的值(沒有移除掉喔!!)*/
17 | pop(); /*移掉最上面的值*/
18 push(); /*新增值到最上面*/
19 empty(); /*回傳bool,檢查是不是空的stack*/
20 | size(); /*stack 的大小*/
```

DP

2.1 3 維 DP 思路

```
1 解題思路: dp[i][j][k]
2|i 跟 j 代表 range i ~ j 的 value
3 | k 在 我 的 理 解 裡 是 視 題 目 的 要 求 而 定 的
4 像是 Remove Boxes 當中 k 代表的是在 i 之前還
     有多少個連續的箱子
 所以每次區間消去的值就是(k+1) * (k+1)
 换言之,我認為可以理解成 k 的意義就是題目今
     天 所 關 注 的 重 點 , 就 是 老 師 說 的 題 目 所 規 定 的
     運算
```

2.2 Knapsack Bounded

```
_{1} const int N = 100, W = 100000;
2 int cost[N], weight[N], number[N];
3 int c[W + 1];
4 void knapsack(int n, int w)
       for (int i = 0; i < n; ++i)
           int num = min(number[i], w / weight[ 11 | }
           for (int k = 1; num > 0; k *= 2)
11
               if (k > num)
12
                   k = num
13
               num -= k;
               for (int j = w; j >= weight[i] *
                     k; --j)
                    c[j] = max(c[j], c[j -
15
                         weight[i] * k] + cost[i]
                         * k);
16
17
       cout << "Max Prince" << c[w];</pre>
```

2.3 Knapsack sample

```
1 int Knapsack(vector<int> weight, vector<int>
                                                15
       value, int bag Weight)
                                                16
                                                17
      // vector<int> weight = {1, 3, 4};
                                                18
      // vector<int> value = {15, 20, 30};
```

```
// int bagWeight = 4;
vector<vector<int>> dp(weight.size(),
     vector<int>(bagWeight + 1, 0));
for (int j = weight[0]; j <= bagWeight;</pre>
    j++)
    dp[0][i] = value[0];
// weight 數組的大小就是物品個數
for (int i = 1; i < weight.size(); i++)</pre>
    for (int j = 0; j <= bagWeight; j++)</pre>
    { // 遍歷背包容量
        if (j < weight[i]) dp[i][j] = dp</pre>
             [i - 1][j];
        else dp[i][j] = max(dp[i - 1][j
             ], dp[i - 1][j - weight[i]]
             + value[i]);
cout << dp[weight.size() - 1][bagWeight]</pre>
```

2.4 Knapsack Unbounded

```
_{1} const int N = 100, W = 100000;
1 int cost[N], weight[N];
3 \mid int c[W + 1];
4 void knapsack(int n. int w)
      memset(c, 0, sizeof(c));
      for (int i = 0; i < n; ++i)
          for (int j = weight[i]; j <= w; ++j)</pre>
              c[j] = max(c[j], c[j - weight[i
                   ]] + cost[i]);
      cout << "最高的價值為" << c[w];
  2.5 LCIS
int LCIS len(vector<int> arr1, vetor<int>
      arr2)
```

int n = arr1.size(), m = arr2.size();

for (int i = 0; i < n; i++) int current = 0; for (int j = 0; j < m; j++)

table[j] = 0;

vector<int> table(m, 0);

for (int j = 0; j < m; j++)

```
if (arr1[i] == arr2[j])
    if (current + 1 > table[j])
        table[i] = current + 1;
if (arr1[i] > arr2[i])
    if (table[j] > current)
        current = table[j];
```

```
int result = 0;
for (int i = 0; i < m; i++)
    if (table[i] > result)
        result = table[i];
return result:
```

2.6 LCS

21

22

23

24

25

26

14

25

30

```
int LCS(vector<string> Ans, vector<string>
      int N = Ans.size(), M = num.size();
      vector<vector<int>> LCS(N + 1, vector<</pre>
           int>(M + 1, 0));
      for (int i = 1; i <= N; ++i)
          for (int j = 1; j <= M; ++j)
